Investment objective (summary of investment policy)

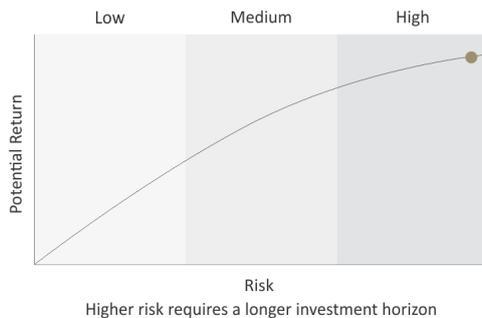

The PSG Equity Fund's objective is to offer investors long-term capital growth without assuming a greater risk, and earn a higher rate of return than that of the South African Equity Market as presented by the FTSE/JSE All Share Index (including income). The investment policy provides for investment in a mix of securities and assets in liquid form and can include listed and unlisted financial instruments (derivatives).

Who should consider investing?

Fund specific risks: The fund sits at the top end of the risk/reward spectrum and investors should be comfortable with fluctuations in shares on stock markets and be prepared to accept the risk of capital loss. The portfolio is concentrated in local and foreign equities and therefore more volatile and exposed to market and currency risks. Property shares may be included in the portfolio and can carry the same risk as investing directly in real estate which is subject to economic and political conditions, interest rates and tax considerations. Investing in foreign securities may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations. Changes in the relative values of different currencies may adversely affect the value of investments and any related income.

This fund is suitable for investors who:

- want an equity-focused portfolio that should produce high real returns above inflation and capital appreciation over the long term
- are comfortable with significant stock market fluctuations
- are willing to accept potential capital loss
- have a long-term investment horizon of seven years and longer

Current context

The positive momentum equity markets enjoyed during the second quarter of the year was sustained during the third quarter. Global equities reached all-time highs during the period, ending a bear market that had, at one point, reduced the value of publicly traded companies by more than a third. This continues to be a remarkable outcome considering the deepest global recession in decades and the ongoing elevated levels of economic uncertainty in the wake of the COVID-19 pandemic. Locally, the JSE/FTSE All Share Index closely mirrors this feat by being merely a couple of percentage points shy of a positive year-to-date performance and inches away from all-time highs.

Growth and technology companies are large components of global indices and have overwhelmingly driven the strong headline recovery. However, the gains have not been evenly distributed and most global shares are still in negative territory.

Our perspective

It goes without saying that these are unprecedented times, but even more acutely so for value investors, as growth and large cap stocks continue to outperform to a remarkable degree. History suggests that over long periods of time, investors are rewarded for investing in cheaper assets, rather than expensive ones. This is especially true where there is a degree of discomfort, i.e. when investing in out-of-favour assets with above average chances of being mispriced. We are witnessing one of the most brutal value cycles on record, with the extent of the divergence in relative performance compared to growth stocks being by far the widest this century, surpassing the experience of the Great Depression and the dotcom bubble. However, we believe this creates a very interesting opportunity for the (very few) investors who are prepared to invest in what is out of favour. The current environment is presenting an abundance of such investment opportunities – a setup which we believe will generate excellent long-term returns for investors.

Considering the high expectations reflected in aggressively crowded areas of the market, as in the case of the largest constituents, we believe there has never been a more valuable juncture for a differentiated, active approach to add a tremendous benefit to client portfolios looking forward. Our sense is that there is a high degree of complacency at the index level that little can go wrong, and that past performance can be replicated with a high degree of certainty. We are not complacent in our approach, and recognise the risks of simply projecting a past experience as a given future outcome.

As tough as the environment has been, we think current market conditions are highly favourable for building well-diversified portfolios, and as such we are excited about prospects embedded in our portfolios.

Portfolio performance and positioning

Cheap stocks, particularly in emerging markets like South Africa, have under-performed significantly over the last two years. The Covid-19 pandemic exacerbated this situation, shattering an already weak domestic economy and low levels of confidence. Consequently, the fund's recent performance has been disappointing. While the future remains very uncertain, we have used market dislocations and very low prices to the benefit of our clients. This provides us with confidence that the recent drawdowns will prove to be temporary. Encouragingly, most of our actions from March onwards have delivered pleasing results to date. We have high levels of confidence that the companies our clients are invested in trade at a material discount to our assessment of worth. Our highest conviction ideas are quality businesses with inherent resilience and cash generation that support our expectation that 2020 will set a foundation for strong growth in the years ahead. Shareholder returns are underpinned by very attractive prospective 2021 shareholder payouts (dividend yields and share buybacks) for several of our larger positions: it is reasonable to expect a scramble for companies yielding 7% to -15% in a world of 3.5% domestic and 0% global interest rates. A combination of high payout yields that grow over time and a reversion in ratings to more normalised levels could result in extremely attractive investment returns for investors that can look through the current bout of elevated uncertainty and lack of confidence.

Over the quarter the PSG Equity Fund returned 5.26% versus the benchmark return of 0.67%. The contributors over this period were industrials (1.62%), foreign equities (1.40%) and resources (1.40%). The fund is suitable for investors with an investment term of 7 years and longer. Over the short-term returns can be volatile and for this reason it is important to measure fund returns over the relevant investment term. Since inception the fund has produced an annual return of 13.5% versus the benchmark return of 12.4%.

Rolling returns (%)

This chart shows you how the performance can vary over time. It is an indication of the distribution of historical rolling returns from the portfolio over each rolling 12-month period.

What is a total expense ratio?

The Total Expense Ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past three years. This percentage of the average Net Asset Value (NAV) of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. A higher TER ratio does not necessarily imply a poor return, nor does a low TER ratio imply a good return. The current TER cannot be regarded as an indication of future TERs. Part of the Annual Management Fee is payable to the financial intermediary. The sum of the TER and transaction costs is shown as the Total Investment Charge. Since Fund returns are quoted after the deduction of these expenses, the TER and transaction costs should not be deducted again from published returns.

Total investment charge

Total Investment Charge annualised for the period 1/10/2017 to 30/09/2020

Total Expense Ratio % (incl. VAT)	1.75
<i>Annual Management Fee % (incl. VAT)</i>	1.73
<i>Other costs excl. transaction costs % (incl. VAT)</i>	0.02
<i>Transaction costs % (incl. VAT)</i>	0.28
Total Investment Charge % (incl. VAT)	2.03

Transaction costs

Transaction costs are shown separately and are a necessary cost in administering the Financial Product and impacts Financial Product returns.

Transaction costs should not be considered in isolation as return may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Fees

A schedule of fees and charges and maximum commissions is available on request from PSG Collective Investments (RF) Limited. Commission and incentives may be paid and, if so, are included in the overall costs. Different classes of participatory interest can apply to these portfolios and are subject to different fees, charges and possibly dividend withholding tax and will thus have differing performances. Adviser fees are negotiated between the client and adviser and is distinct from the other fees on this document.

Disclaimer

Collective Investment Schemes in Securities (CIS) are generally medium to long-term investments. The value of participatory interests (units) or the investment may go down as well as up and past performance is not a guide to future performance. Fluctuations or movements in the exchange rates may cause the value of underlying international investments to go up or down. CIS are traded at ruling prices and can engage in borrowing and scrip lending. The portfolio may borrow up to 10% of its market value to bridge insufficient liquidity. Where foreign securities are included in a portfolio, the portfolio is exposed to risks such as potential constraints on liquidity and the repatriation of funds, macroeconomic, political, foreign exchange, tax, settlement and potential limitations on the availability of market information. The portfolios may be capped at any time in order for them to be managed in accordance with their mandate. PSG Collective Investments (RF) Limited does not provide any guarantee either with respect to the capital or the return of the portfolio. Due to rounding, numbers presented throughout this document may not add up precisely to the totals provided.

Performance

All performance data for a lump sum, net of fees, include income and assumes reinvestment of income on a NAV to NAV basis. Annualised performances show longer term performance rescaled over a 12 month period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Performance is calculated for the portfolio and individual investor performance may differ as a result thereof. The portfolio is valued at 15h00 daily. Cut-off time is determined by the platform. Income distributions are net of any applicable taxes. Actual annual figures are available to the investor on request. Prices are published daily and available on the website www.psg.co.za/asset-management and in the daily newspapers. Figures quoted are from Morningstar Inc.

Pricing

Forward pricing is used. Unit trust prices are calculated on a net asset value (NAV) basis, which is the market value of all assets in the portfolio including income accruals less permissible deductions divided by the number of units in issue.

Redemptions

The ability of a portfolio to repurchase is dependent upon the liquidity of the securities and cash of the portfolio. To protect investors, a manager may suspend repurchases for a period, subject to regulatory approval, to await liquidity. A suspension ensures that the sale of a large number of units will not force PSG Collective Investments to sell the underlying investments at a price in the market which could have a negative impact on investors. PSG Collective Investments will keep all investors informed should a situation arise where such suspension is required.

Company details

PSG Collective Investments (RF) Limited is registered as a CIS Manager with the Financial Sector Conduct Authority, and a member of the Association of Savings and Investments South Africa (ASISA) through its holdings company PSG Konsult Limited. The management of the portfolio is delegated to PSG Asset Management (Pty) Ltd, an authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act 2002, FSP no 29524. PSG Asset Management (Pty) Ltd and PSG Collective Investments (RF) Limited are subsidiaries of PSG Konsult Limited. PSG Collective Investments (RF) Limited can be contacted on +27(21) 799 8000; (toll free) 0800 600 168, via email assetmanagement@psg.co.za.

Conflict of interest disclosure

The Fund may from time to time invest in a portfolio managed by a related party.

PSG Collective Investments (RF) Limited or the fund manager may negotiate a discount in fees charged by the underlying portfolio. All discounts negotiated are reinvested in the Fund for the benefit of the investors. Neither PSG Collective Investments (RF) Limited nor PSG Asset Management (Pty) Ltd retains any portion of such discount for their own accounts. The fund manager may use the brokerage services of a related party, PSG Securities Ltd.

Additional information

Additional information is available free of charge on the website www.psg.co.za/asset-management and may include publications, brochures, forms and annual reports.

This is the Minimum Disclosure Document (MDD) for the PSG Equity Fund A.

Investment objective (summary of investment policy)

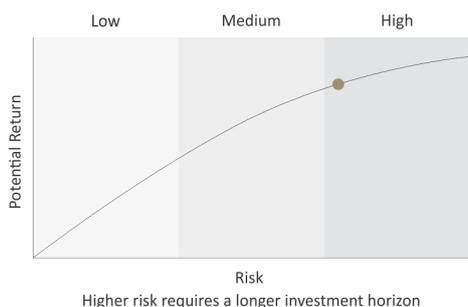

The PSG Flexible Fund's objective is to achieve superior medium- to long-term capital growth by investing in selected sectors of the equity, gilt and money markets, both locally and abroad. The fund has a flexible asset allocation mandate and equity exposure will be varied based on opportunity. The fund can invest up to 100% in equities of which up to 30% can be invested in foreign equity and may include listed and unlisted financial instruments (derivatives) in its portfolio. The selected sectors of the equity portion of the portfolio will change from time to time in accordance with changing market conditions and economic trends.

Who should consider investing?

Fund specific risks: The fund sits within the upper half of the risk/reward spectrum. Investors should be comfortable with fluctuations in stock markets and interest rates. The risk of short-term monetary loss is high. The portfolio is exposed to equity as well as default and interest rate risks. Interest rate risk is the risk that the value of fixed income investments tends to decrease when interest rates and/or inflation rises. Default risk is where the issuers of fixed income instruments may not be able to meet interest or capital repayments. Where derivatives are used, it may increase overall risk by magnifying the effect of both gains and losses and may lead to large financial losses. Property shares may be included in the portfolio which can carry the same risk as investing directly in real estate and is subject to economic and political conditions, interest rates and tax considerations. Investing in foreign securities may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations. Changes in the relative values of different currencies may adversely affect the value of investments and any related income.

This fund is suitable for investors who:

- want exposure to the equity market, but with managed risk levels
- aim to build wealth
- are willing to accept potential capital loss
- have a medium- to long-term investment horizon of five years and longer

Current context

The positive momentum equity markets enjoyed during the second quarter of the year was sustained during the third quarter. Global equities reached all-time highs during the period, ending a bear market that had, at one point, reduced the value of publicly traded companies by more than a third. This continues to be a remarkable outcome considering the deepest global recession in decades and the ongoing elevated levels of economic uncertainty in the wake of the COVID-19 pandemic. Locally, the JSE/FTSE All Share Index closely mirrors this feat by being merely a couple of percentage points shy of a positive year-to-date performance and inches away from all-time highs.

Growth and technology companies are large components of global indices and have overwhelmingly driven the strong headline recovery. However, the gains have not been evenly distributed and most global shares are still in negative territory.

Our perspective

It goes without saying that these are unprecedented times, but even more acutely so for value investors, as growth and large cap stocks continue to outperform to a remarkable degree. History suggests that over long periods of time, investors are rewarded for investing in cheaper assets, rather than expensive ones. This is especially true where there is a degree of discomfort, i.e. when investing in out-of-favour assets with above average chances of being mispriced. We are witnessing one of the most brutal value cycles on record, with the extent of the divergence in relative performance compared to growth stocks being by far the widest this century, surpassing the experience of the Great Depression and the dotcom bubble. However, we believe this creates a very interesting opportunity for the (very few) investors who are prepared to invest in what is out of favour. The current environment is presenting an abundance of such investment opportunities – a setup which we believe will generate excellent long-term returns for investors.

Considering the high expectations reflected in aggressively crowded areas of the market, as in the case of the largest constituents, we believe there has never been a more valuable juncture for a differentiated, active approach to add a tremendous benefit to client portfolios looking forward. Our sense is that there is a high degree of complacency at the index level that little can go wrong, and that past performance can be replicated with a high degree of certainty. We are not complacent in our approach, and recognise the risks of simply projecting a past experience as a given future outcome.

As tough as the environment has been, we think current market conditions are highly favourable for building well-diversified portfolios, and as such we are excited about prospects embedded in our portfolios.

Portfolio performance and positioning

Cheap stocks, particularly in emerging markets like South Africa, have under-performed significantly over the last two years. The Covid-19 pandemic exacerbated this situation, increasing pressure on an already weak domestic economy and further lowering confidence levels. Consequently, the fund's recent performance has been disappointing. While the future remains very uncertain, we have used market dislocations and very low prices to the benefit of our clients. This provides us with confidence that the recent drawdowns will prove to be temporary. Encouragingly, most of our actions from March onwards have delivered pleasing results to date. We have high levels of confidence that the companies our clients are invested in trade at a material discount to our assessment of worth. Our highest conviction ideas are quality businesses with inherent resilience and cash generation that support our expectation that 2020 will set a foundation for strong growth in the years ahead. Shareholder returns are underpinned by very attractive prospective 2021 shareholder payouts (dividend yields and share buybacks) for several of our larger positions: it is reasonable to expect a scramble for companies yielding 7% to 15% in a world of 3.5% domestic and 0% global interest rates. A combination of high payout yields that grow over time and a reversion in ratings to more normalised levels could result in extremely attractive investment returns for investors that can look through the current bout of elevated uncertainty and lack of confidence.

Over the quarter the PSG Flexible Fund returned 4.61% versus the benchmark return of 3.40%. The contributors over this period were industrials (1.65%), foreign equities (1.17%) and financials (0.86%). The fund is suitable for investors with an investment term of 5 years and longer. Over the short-term returns can be volatile and for this reason it is important to measure fund returns over the relevant investment term. Since inception, the fund has produced an annual return of 12% versus benchmark return of 11.6%.

The fund currently holds low levels of cash compared to the historical experience. This reflects the attractiveness of the opportunity set: we can find many good businesses on the JSE and abroad that are out-of-favour and hence trading at deep crisis levels. We sold out of domestic bonds in favour of domestic equities during the quarter. This was a result of more clarity around the emergence from severe lockdown and the favourable conditions for investing in domestic counters.

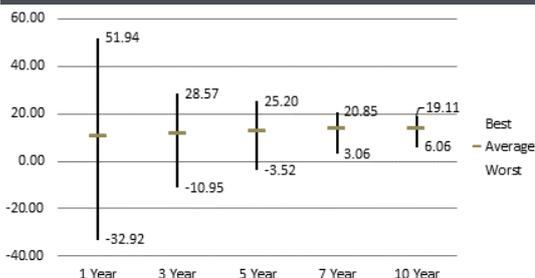

Changes in portfolio positioning

Q2 2020		Q3 2020	
Domestic equity	59.5%	Domestic equity	65.9%
Domestic cash	4.3%	Domestic cash	3.7%

Rolling returns (%)

This chart shows you how the performance can vary over time. It is an indication of the distribution of historical rolling returns from the portfolio over each rolling 12-month period.

What is a total expense ratio?

The Total Expense Ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past three years. This percentage of the average Net Asset Value (NAV) of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. A higher TER ratio does not necessarily imply a poor return, nor does a low TER ratio imply a good return. The current TER cannot be regarded as an indication of future TERs. Part of the Annual Management Fee is payable to the financial intermediary. The sum of the TER and transaction costs is shown as the Total Investment Charge. Since Fund returns are quoted after the deduction of these expenses, the TER and transaction costs should not be deducted again from published returns.

Performance fee

The fund's daily net asset value per share (NAV) is compared to the fund's High Water Mark (HWM highest NAV achieved) daily. Where the fund's NAV is greater than the HWM, a performance fee equal to 7% (excl. VAT) of the outperformance is levied. The performance fee is accrued in the unit price daily and collected monthly. No performance fees are charged if the fund NAV is lower than the HWM NAV. The performance fee is uncapped with a since inception High Water Mark.

Base fee	1% (excl.VAT)
Threshold	High Water Mark
Sharing ratio	7% (excl.VAT)
Minimum fee	1% (excl.VAT)
Maximum fee	Uncapped, with a since inception High Water Mark. The fund's highest total TER since inception of TER was 3.55% (incl.VAT)
Total Expense Ratio (TER) (3 years)	1.50% (incl.VAT)

Example:

You invest R100,000 in a fund today. The fund earns a 2% return over day 1 and the NAV at R102,000. A performance fee of 7% will be payable on the 2% gain. i.e. 0.14% (excl. Vat)

Over day 2, the NAV reduces by R3,000 to R99,000. No performance fee is payable for day 2.

On day 3, NAV increases to R105,000. The performance fee will be payable on the 2.94% gain (NAV of R105 000 – R102 000 the previous HWM). The performance will now be 7% of 2.94% i.e. 0.2% (excl. VAT).

The NAV of R105 000 is now the new HWM.

Frequently Asked Questions on Performance Fees are available on the website <https://www.psg.co.za/files/asset-management/Performance-Fees-FAQs.pdf>.

Disclaimer

Investment objective (summary of investment policy)

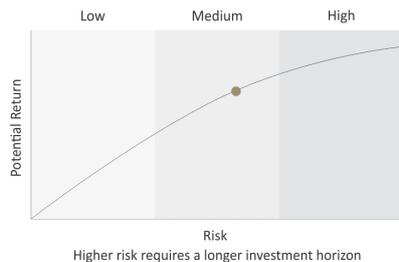

The PSG Balanced Fund's objective is to achieve long-term growth of capital and a reasonable level of income for investors. The investment policy provides for the active management of the portfolio assets in equities, bonds, property and cash both domestically and in foreign markets. The fund can have up to 75% in equities, 25% in listed property and 30% in foreign markets and may include listed and unlisted financial instruments (derivatives). The fund operates within the constraints of Regulation 28 of the Pension Funds Act.

Who should consider investing?

Fund specific risks: The fund sits in the middle of the risk/reward spectrum and investors should be comfortable with fluctuations in shares on stock markets. The risk of short-term monetary loss is medium, due to moderate exposure to volatility in the stock markets. The portfolio is exposed to equity as well as default and interest rate risks. Interest rate risk is the risk that the value of fixed income investments tends to decrease when interest rates and/or inflation rises. Default risk is where the issuers of fixed income instruments may not be able to meet interest or capital repayments. Property shares may be included in the portfolio which can carry the same risk as investing directly in real estate and is subject to economic and political conditions, interest rates and tax considerations. Investing in foreign securities may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations. Changes in the relative values of different currencies may adversely affect the value of investments and any related income. Derivative instruments are included for efficient portfolio management purposes. The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a portfolio.

This fund is suitable for investors who:

- aim to build wealth with a balanced portfolio that diversifies the risk over the various asset classes
- are comfortable with market fluctuation risk
- willing to accept potential capital loss
- would prefer the fund manager to make the asset allocation decisions
- have an investment horizon of five years and longer

Current context

The positive momentum equity markets enjoyed during the second quarter of the year was sustained during the third quarter. Global equities reached all-time highs during the period, ending a bear market that had, at one point, reduced the value of publicly traded companies by more than a third. This continues to be a remarkable outcome considering the deepest global recession in decades and the ongoing elevated levels of economic uncertainty in the wake of the COVID-19 pandemic. Locally, the JSE/FTSE All Share Index closely mirrors this feat by being merely a couple of percentage points shy of a positive year-to-date performance and inches away from all-time highs.

Growth and technology companies are large components of global indices and have overwhelmingly driven the strong headline recovery. However, the gains have not been evenly distributed and most global shares are still in negative territory.

Our perspective

It goes without saying that these are unprecedented times, but even more acutely so for value investors, as growth and large cap stocks continue to outperform to a remarkable degree. History suggests that over long periods of time, investors are rewarded for investing in cheaper assets, rather than expensive ones. This is especially true where there is a degree of discomfort, i.e. when investing in out-of-favour assets with above average chances of being mispriced. We are witnessing one of the most brutal value cycles on record, with the extent of the divergence in relative performance compared to growth stocks being by far the widest this century, surpassing the experience of the Great Depression and the dotcom bubble. However, we believe this creates a very interesting opportunity for the (very few) investors who are prepared to invest in what is out of favour. The current environment is presenting an abundance of such investment opportunities – a setup which we believe will generate excellent long-term returns for investors.

Considering the high expectations reflected in aggressively crowded areas of the market, as in the case of the largest constituents, we believe there has never been a more valuable juncture for a differentiated, active approach to add a tremendous benefit to client portfolios looking forward. Our sense is that there is a high degree of complacency at the index level that little can go wrong, and that past performance can be replicated with a high degree of certainty. We are not complacent in our approach, and recognise the risks of simply projecting a past experience as a given future outcome. As tough as the environment has been, we think current market conditions are highly favourable for building well-diversified portfolios, and as such we are excited about prospects embedded in our portfolios.

Portfolio performance and positioning

Over the quarter the PSG Balanced Fund returned 3.48% versus the benchmark return of 3.17%. The contributors over this period were industrials (1.82%), financials (0.81%) and resources (0.81%) while real estate detracted (-0.19%) from overall performance. The fund is suitable for investors with an investment term of 5 years and longer. Over the short-term returns can be volatile and for this reason it is important to measure fund returns over the relevant investment term. Since inception the fund has produced an annual return of 11.6% compared to a benchmark return of 10.4%.

Total equity exposure increased from 72.8% to 73.1%, largely due to market movement. We increased exposure to local shares such as Remgro, Imperial and Glencore at attractive prices. Property exposure of 4.7% is mostly attributable to a promising selection of US REITS, while we have started to selectively build a small position in South African REITS.

Domestic bond exposure reduced slightly to 19.8%. We retain an exposure to government fixed and inflation-linked bonds at very attractive yields.

The fund remains highly liquid with negligible exposure to illiquid credit instruments.

The fund continues to seek to exploit the opportunity in selective JSE-listed equities where we think visible macro fears and investor apathy (particularly on the part of foreigners) is resulting in extreme mispricings. We are seeing many cases of prices not adequately capturing inherent qualities and defensive characteristics.

Rolling returns (%)

This chart shows you how the performance can vary over time. It is an indication of the distribution of historical rolling returns from the portfolio over each rolling 12-month period.

What is a total expense ratio?

The Total Expense Ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past three years. This percentage of the average Net Asset Value (NAV) of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. A higher TER ratio does not necessarily imply a poor return, nor does a low TER ratio imply a good return. The current TER cannot be regarded as an indication of future TERs. Part of the Annual Management Fee is payable to the financial intermediary. The sum of the TER and transaction costs is shown as the Total Investment Charge. Since Fund returns are quoted after the deduction of these expenses, the TER and transaction costs should not be deducted again from published returns.

Total investment charge

Total Investment Charge annualised for the period 1/10/2017 to 30/09/2020

Total Expense Ratio % (incl. VAT)	1.75
<i>Annual Management Fee % (incl. VAT)</i>	1.73
<i>Other costs excluding transaction costs (incl. VAT)</i>	0.02
<i>Transaction costs % (incl. VAT)</i>	0.25
Total Investment Charge % (incl. VAT)	2.00

Transaction costs

Transaction costs are shown separately and are a necessary cost in administering the Financial Product and impacts Financial Product returns.

Transaction costs should not be considered in isolation as return may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Fees

A schedule of fees and charges and maximum commissions is available on request from PSG Collective Investments (RF) Limited. Commission and incentives may be paid and, if so, are included in the overall costs. Different classes of participatory interest can apply to these portfolios and are subject to different fees, charges and possibly dividend withholding tax and will thus have differing performances. Adviser fees are negotiated between the client and adviser and is distinct from the other fees on this document.

Disclaimer

Collective Investment Schemes in Securities (CIS) are generally medium to long-term investments. The value of participatory interests (units) or the investment may go down as well as up and past performance is not a guide to future performance. Fluctuations or movements in the exchange rates may cause the value of underlying international investments to go up or down. CIS are traded at ruling prices and can engage in borrowing and scrip lending. The portfolio may borrow up to 10% of its market value to bridge insufficient liquidity. Where foreign securities are included in a portfolio, the portfolio is exposed to risks such as potential constraints on liquidity and the repatriation of funds, macroeconomic, political, foreign exchange, tax, settlement and potential limitations on the availability of market information. The portfolios may be capped at any time in order for them to be managed in accordance with their mandate. PSG Collective Investments (RF) Limited does not provide any guarantee either with respect to the capital or the return of the portfolio. Due to rounding, numbers presented throughout this document may not add up precisely to the totals provided.

Regulation 28

The fund is managed according to Regulation 28 of the Pension Funds Act. The South African retirement fund industry is governed by the Pension Funds Act No. 24 of 1956. Regulation 28 of the Pension Fund Act prescribes the maximum limits in asset classes that an approved retirement fund may invest in. Exposures in excess of the limits will be corrected immediately, except where due to a change in the fair value or characteristic of an asset, e.g. market value fluctuations, in which case they will be corrected within a reasonable time period.

Performance

All performance data for a lump sum, net of fees, include income and assumes reinvestment of income on a NAV to NAV basis. Annualised performances show longer term performance rescaled over a 12 month period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Performance is calculated for the portfolio and individual investor performance may differ as a result thereof. The portfolio is valued at 15h00 daily. Cut-off time is determined by the platform. Income distributions are net of any applicable taxes. Actual annual figures are available to the investor on request. Prices are published daily and available on the website www.psg.co.za/asset-management and in the daily newspapers. Figures quoted are from Morningstar Inc.

Pricing

Forward pricing is used. Unit trust prices are calculated on a net asset value (NAV) basis, which is the market value of all assets in the portfolio including income accruals less permissible deductions divided by the number of units in issue.

Redemptions

The ability of a portfolio to repurchase is dependent upon the liquidity of the securities and cash of the portfolio. To protect investors, a manager may suspend repurchases for a period, subject to regulatory approval, to await liquidity. A suspension ensures that the sale of a large number of units will not force PSG Collective Investments to sell the underlying investments at a price in the market which could have a negative impact on investors. PSG Collective Investments will keep all investors informed should a situation arise where such suspension is required.

Company details

PSG Collective Investments (RF) Limited is registered as a CIS Manager with the Financial Sector Conduct Authority, and a member of the Association of Savings and Investments South Africa (ASISA) through its holdings company PSG Konsult Limited. The management of the portfolio is delegated to PSG Asset Management (Pty) Ltd, an authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act 2002, FSP no 29524. PSG Asset Management (Pty) Ltd and PSG Collective Investments (RF) Limited are subsidiaries of PSG Konsult Limited. PSG Collective Investments (RF) Limited can be contacted on +27(21) 799 8000; (toll free) 0800 600 168, via email assetmanagement@psg.co.za.

Conflict of interest disclosure

The Fund may from time to time invest in a portfolio managed by a related party. PSG Collective Investments (RF) Limited or the fund manager may negotiate a discount in fees charged by the underlying portfolio. All discounts negotiated are reinvested in the Fund for the benefit of the investors. Neither PSG Collective Investments (RF) Limited nor PSG Asset Management (Pty) Ltd retains any portion of such discount for their own accounts. The fund manager may use the brokerage services of a related party, PSG Securities Ltd.

This is the Minimum Disclosure Document (MDD) for the PSG Balanced Fund A.

Investment objective (summary of investment policy)

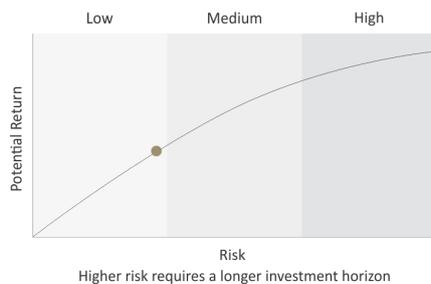

The PSG Stable Fund's objective is to achieve capital appreciation and generate a performance return of CPI+3% over a rolling three-year period with low volatility and low correlation to equity markets through all market cycles. The investment policy provides for investment in a mix of debt securities, money market instruments, bonds, inflation-linked securities, listed equities and property, preference shares and other high yielding securities and derivatives. The fund may have up to 40% in equities. The fund operates within the constraints of Regulation 28 of the Pension Funds Act.

Who should consider investing?

Fund specific risks: The fund sits in the lower middle of the risk/reward spectrum and investors should be comfortable with fluctuations in markets. The risk of short-term monetary loss is low to medium. The portfolio is exposed to equity as well as default and interest rate risks. Interest rate risk is the risk that the value of fixed income investments tends to decrease when interest rates and/or inflation rises. Default risk is where the issuers of fixed income instruments may not be able to meet interest or capital repayments. Property shares may be included in the portfolio and can carry the same risk as investing directly in real estate which is subject to economic and political conditions, interest rates and tax considerations. Investing in foreign securities may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations. Changes in the relative values of different currencies may adversely affect the value of investments and any related income. Derivative instruments are included for efficient portfolio management purposes. The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a portfolio.

This fund is suitable for investors who:

- have a moderate risk appetite but require capital growth in real terms
- have a medium-term investment horizon of three years and longer
- are comfortable with fluctuations in markets

Current context

The positive momentum equity markets enjoyed during the second quarter of the year was sustained during the third quarter. Global equities reached all-time highs during the period, ending a bear market that had, at one point, reduced the value of publicly traded companies by more than a third. This continues to be a remarkable outcome considering the deepest global recession in decades and the ongoing elevated levels of economic uncertainty in the wake of the COVID-19 pandemic. Locally, the JSE/FTSE All Share Index closely mirrors this feat by being merely a couple of percentage points shy of a positive year-to-date performance and inches away from all-time highs.

Growth and technology companies are large components of global indices and have overwhelmingly driven the strong headline recovery. However, the gains have not been evenly distributed and most global shares are still in negative territory.

Our perspective

It goes without saying that these are unprecedented times, but even more acutely so for value investors, as growth and large cap stocks continue to outperform to a remarkable degree. History suggests that over long periods of time, investors are rewarded for investing in cheaper assets, rather than expensive ones. This is especially true where there is a degree of discomfort, i.e. when investing in out-of-favour assets with above average chances of being mispriced. We are witnessing one of the most brutal value cycles on record, with the extent of the divergence in relative performance compared to growth stocks being by far the widest this century, surpassing the experience of the Great Depression and the dotcom bubble. However, we believe this creates a very interesting opportunity for the (very few) investors who are prepared to invest in what is out of favour. The current environment is presenting an abundance of such investment opportunities – a setup which we believe will generate excellent long-term returns for investors.

Considering the high expectations reflected in aggressively crowded areas of the market, as in the case of the largest constituents, we believe there has never been a more valuable juncture for a differentiated, active approach to add a tremendous benefit to client portfolios looking forward. Our sense is that there is a high degree of complacency at the index level that little can go wrong, and that past performance can be replicated with a high degree of certainty. We are not complacent in our approach, and recognise the risks of simply projecting a past experience as a given future outcome. As tough as the environment has been, we think current market conditions are highly favourable for building well-diversified portfolios, and as such we are excited about prospects embedded in our portfolios.

Portfolio performance and positioning

The PSG Stable Fund has diversified exposure across offshore equity and property (16%), SA shares (including shares with rand-hedge characteristics, 26%), domestic bonds (50%), and cash and negotiable certificates of deposit (8%). Domestic bonds comprise sovereign nominal bonds (16%), sovereign inflation-linked bonds (20%), fixed-rate bonds (including government guaranteed, 6%), and floating-rate bonds (6%). The fund is positioned more offensively than has been the case historically which reflects the attractiveness of the opportunity set across most asset classes – unprecedented considering the breadth and degree. Although cash exposure has declined over the quarter, we have favoured shorter-dated inflation-linked bonds which we believe offer considerably better yields at relatively low levels of risk. Domestic equity exposure has also increased slightly and we continue to balance the attractive opportunities evident in domestic assets with overall portfolio risk. Aggregate liquidity in the fund remains healthy. Cash and liquid short-dated government bonds provide ample firepower which can be used in the event of further market disruption, or if we see opportunities to deploy further into assets trading at wide margins of safety compared to their inherent quality.

Over the quarter the PSG Stable Fund returned 2.15% versus the benchmark return of 2.71%. The contributors over this period were industrials (0.88%), government bonds (0.54%), financials (0.30%) and the detractors were real estate (-0.09%). The fund is suitable for investors with an investment term of 3 years and longer. Since inception, the fund has produced annualised returns of 6.5% versus benchmark return of 8.1% per annum.

The fund's recent performance has been disappointing and this has caused some discomfort for clients. Cheap assets, particularly in South Africa, have underperformed significantly over the last two years. The Covid-19 pandemic exacerbated this situation, increasing pressure on an already weak domestic economy and further lowering confidence levels. While the future remains very uncertain, we have used market dislocations and very low prices to the benefit of our clients. This provides us with confidence that the recent drawdowns will prove to be temporary. Encouragingly, most of our actions from March onwards have delivered pleasing results to date. We have high levels of confidence that the assets our clients are invested in, trade at a material discount to our assessment of their worth.

Additional information

Additional information is available free of charge on the website www.psg.co.za/asset-management and may include publications, brochures, forms and annual reports.

This is the Minimum Disclosure Document (MDD) for the PSG Stable Fund A.

Investment objective (summary of investment policy)

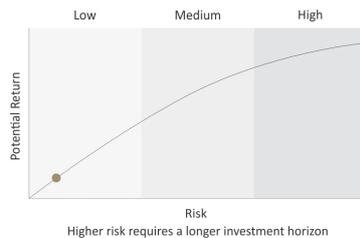

The PSG Diversified Income Fund's objective is to preserve capital while maximising income returns for investors. The portfolio comprises of a mix of high-yielding securities, property, bonds, preference shares and assets in liquid form (both local and foreign). The fund will optimise the asset allocation to achieve the objective over time. The equity exposure of the portfolio, excluding property shares, is limited to 10%. The portfolio may include financial instruments up to the extent and limits allowed by legislation. The fund operates within the constraints of Regulation 28 of the Pension Funds Act.

Who should consider investing?

Fund specific risks: The fund sits in the lower end of the risk/reward spectrum and investors should be comfortable with a small degree of exposure to market and interest rate fluctuations. The risk of short-term monetary loss is low but not completely eliminated. The portfolio is concentrated in bonds and cash with a small exposure to equity. The fund is primarily exposed to default and interest rate risks. Interest rate risk is the risk that the value of fixed income investments tends to decrease when interest rates and/or inflation rises. Default risk is where the issuers of fixed income instruments may not be able to meet interest or capital repayments. Property shares may be included in the portfolio and can carry the same risk as investing directly in real estate which is subject to economic and political conditions, interest rates and tax considerations. Investing in foreign securities may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations. Changes in the relative values of different currencies may adversely affect the value of investments and any related income.

This fund is suitable for investors who:

- have a low risk appetite
- want to earn an income, but need to try and beat inflation
- have a short- to medium-term investment horizon of two years and longer

Current context

Fixed income market performance for the third quarter of 2020 was mixed following a very strong performance in the second quarter. This was largely due to global sentiment weakening over the period. Locally, the market was divided on the likely outcome of the interest rate decision before the Monetary Policy Committee (MPC) meeting on 18 September. In a close vote, the South African Reserve Bank (SARB) decided to maintain the repo rate unchanged at the current 3.5%, leaving markets roughly unchanged. Inflation printed at a low of 3.1% for the month of August 2020, largely in line with expectations which continue to plot a muted path for future inflation. The market is awaiting the revised budget (now expected on 28 October 2020) and the promised economic recovery plan by the President (the final version is expected mid-October) to assess whether the necessary reforms and adjustments will be made to ensure South Africa can return to a sustainable fiscal trajectory over the medium term. The narrative understandably remains fairly negative, as evidenced by the cheap valuations (high yields) we are seeing in the sovereign bond market. Importantly, the flow of liquidity we have seen introduced into the market during the year continues to provide relative yield stability, which has generally resulted in positive returns for fixed income investors over the quarter.

Nominal bonds delivered positive, cash-beating returns over the quarter. The area of the curve represented by the R186 (5 years) delivered an attractive 4.19% return. However, longer-dated nominal bonds underperformed this as the curve steepened over the period. Similarly, inflation-linked bonds delivered good performance, other than very long-dated bonds. These long-dated sovereign bonds were largely influenced by the poor global backdrop, with foreigners estimated to have sold roughly R7.7bn of bonds over the period. Cash delivered 1.16% returns for the quarter which was to be expected as rate cuts during the year begin to show in the cash market. Despite no further rate cuts, this low level of returns from cash is expected to continue, with a high likelihood of underperforming inflation and income targets. Despite the poorer fundamental backdrop, corporate bond markets saw significant tightening in spreads over the period as the excess liquidity in the market and the search for a cash-beating yields saw very high demand for these assets. As we have mentioned in previous communications, we believe this area of the market is benefiting from a search for yield and a low bar being placed on its inherent credit risk relative to that of the sovereign market. However, on a positive note, we have seen numerous corporate bond issuers returning to the market to raise funding, which is generally good for the functioning of the fixed income market. Local listed property fell further over the period by roughly 14% as uncertainty in this sector remains high.

Our perspective

The fixed income market remains characterised by diverging risk-adjusted return prospects when assessing the asset classes available to fixed income funds. We continue to believe that given the very visible bear thesis on sovereign bonds, the cheap valuations likely reflect this sentiment and therefore offer much better prospects to outperform cash and inflation over the near term. As noted, yields in non-sovereign bonds have fallen further over the period. We define risk as the risk of permanent capital loss to clients, and therefore remain cautious in areas where we believe the yields are not commensurate with the inherent risks – specifically in corporate bonds. Our funds continue to have a long-term low allocation to these assets.

We have taken advantage of the attractive inflation base effects that are due in the months ahead as inflation had reached a near-term bottom in the second quarter. Specifically, for the month of October 2020, the inflation-carry to be accrued is 1.3% (roughly an annualised 15.6% return). We have done so using the low duration R212 inflation-linked sovereign bond which has a term to maturity of 1.4 years and low credit risk. While we do not believe inflation is likely to increase sharply from these levels anytime soon, this should benefit clients significantly as we see inflation moderate to more normalised levels.

We have been attracted to the local preference share market over the period. Certain higher-quality corporates and bank preference shares have fallen roughly 25% this year and are trading at deep discounts to par value, offering yields in a range of 8.5% to 11.5%. Specifically, bank preference shares are offering yields above those of subordinated debt (bonds with similar characteristics issued by the banks) despite having better legal protections in a stress event. We are therefore looking to build a position in these assets, rather than buying into the optimism we are seeing in the corporate bond market and subordinated debt market.

Portfolio performance and positioning

Over the quarter the PSG Diversified Income Fund returned 2.40% versus the benchmark return of 2.25%. The contributors over this period were government bonds (0.85%), corporate bonds (0.39%) and local money market instruments (0.28%), while preference shares detracted slightly. Over a 1-year period the fund delivered a return of 5.91% versus the benchmark return of 4.09%, despite the tough market environment.

It remains our preference to seek out value in sovereign bonds rather than other over-bought areas of the fixed income market, as we believe doing so better positions us to achieve the fund objective at reasonable risk levels. Our buy lists continue to favour sovereign exposure as a means of increasing the odds of achieving client objectives. Due to the unique dynamic of the inflation-linked bond market, we have significantly increased our exposure in an area of the curve (1.4 years) which should outperform even long-dated bonds over the near term. Further, these bonds are very liquid and provide us with both protection against unforeseen inflation increases, as well as ammunition should we see nominal bonds weaken around the budget.

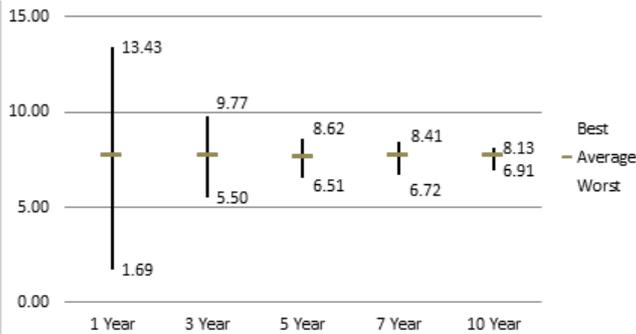

The Diversified Income Fund has built up a position in preference shares and has a diversified holding in local and offshore equity which we believe are currently not being valued appropriately by the market, and thus offers potential to the upside should sentiment turn. We have used opportunities to marginally increase our weighting to offshore cash over the period in order to create more balance against unforeseen events. We remain cautious in allocating to local listed property as the range of outcomes remain wide.

Rolling returns (%)

This chart shows you how the performance can vary over time. It is an indication of the distribution of historical rolling returns from the portfolio over each rolling 12-month period.

What is a total expense ratio?

The Total Expense Ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past three years. This percentage of the average Net Asset Value (NAV) of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. A higher TER ratio does not necessarily imply a poor return, nor does a low TER ratio imply a good return. The current TER cannot be regarded as an indication of future TERs. Part of the Annual Management Fee is payable to the financial intermediary. The sum of the TER and transaction costs is shown as the Total Investment Charge. Since Fund returns are quoted after the deduction of these expenses, the TER and transaction costs should not be deducted again from published returns.

Total investment charge

Total Investment Charge annualised for the period 1/10/2017 to 30/09/2020

Total Expense Ratio % (incl. VAT)	1.19
Annual Management Fee % (incl. VAT)	1.15
Other costs excl. transaction costs % (incl. VAT)	0.04
Transaction costs % (incl. VAT)	0.13
Total Investment Charge % (incl. VAT)	1.32

Transaction costs

Transaction costs are shown separately and are a necessary cost in administering the Financial Product and impacts Financial Product returns.

Transaction costs should not be considered in isolation as return may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

A schedule of fees and charges and maximum commissions is available on request from PSG Collective Investments (RF) Limited. Commission and incentives may be paid and, if so, are included in the overall costs. Different classes of participatory interest can apply to these portfolios and are subject to different fees, charges and possibly dividend withholding tax and will thus have differing performances. Adviser fees are negotiated between the client and adviser and is distinct from the other fees on this document.

Disclaimer

Collective Investment Schemes in Securities (CIS) are generally medium to long-term investments. The value of participatory interests (units) or the investment may go down as well as up and past performance is not a guide to future performance. Fluctuations or movements in the exchange rates may cause the value of underlying international investments to go up or down. CIS are traded at ruling prices and can engage in borrowing and scrip lending. The portfolio may borrow up to 10% of its market value to bridge insufficient liquidity. Where foreign securities are included in a portfolio, the portfolio is exposed to risks such as potential constraints on liquidity and the repatriation of funds, macroeconomic, political, foreign exchange, tax, settlement and potential limitations on the availability of market information. The portfolios may be capped at any time in order for them to be managed in accordance with their mandate. PSG Collective Investments (RF) Limited does not provide any guarantee either with respect to the capital or the return of the portfolio. Due to rounding, numbers presented throughout this document may not add up precisely to the totals provided.

Regulation 28

The fund is managed according to Regulation 28 of the Pension Funds Act. The South African retirement fund industry is governed by the Pension Funds Act No. 24 of 1956. Regulation 28 of the Pension Funds Act prescribes the maximum limits in asset classes that an approved retirement fund may invest in. Exposures in excess of the limits will be corrected immediately, except where due to a change in the fair value or characteristic of an asset, e.g. market value fluctuations, in which case they will be corrected within a reasonable time period.

Performance

All performance data for a lump sum, net of fees, include income and assumes reinvestment of income on a NAV to NAV basis. Annualised performances show longer term performance rescaled over a 12 month period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Performance is calculated for the portfolio and individual investor performance may differ as a result thereof. The portfolio is valued at 15h00 daily. Income distributions are net of any applicable taxes. Cut-off time is determined by the platform. Income distributions are net of any applicable taxes. Actual annual figures are available to the investor on request. Prices are published daily and available on the website www.psg.co.za/asset-management and in the daily newspapers. Figures quoted are from Morningstar Inc.

Pricing

Forward pricing is used. Unit trust prices are calculated on a net asset value (NAV) basis, which is the market value of all assets in the portfolio including income accruals less permissible deductions divided by the number of units in issue.

Redemptions

The ability of a portfolio to repurchase is dependent upon the liquidity of the securities and cash of the portfolio. To protect investors, a manager may suspend repurchases for a period, subject to regulatory approval, to await liquidity. A suspension ensures that the sale of a large number of units will not force PSG Collective Investments to sell the underlying investments at a price in the market which could have a negative impact on investors. PSG Collective Investments will keep all investors informed should a situation arise where such suspension is required.

Yield

The yield for the portion attributable to fixed income instruments is calculated daily on an annualised basis and is based on the historic yield of the fixed income instruments. The fund returns include returns from property and equity instruments.

Company details

PSG Collective Investments (RF) Limited is registered as a CIS Manager with the Financial Sector Conduct Authority, and a member of the Association of Savings and Investments South Africa (ASISA) through its holdings company PSG Konsult Limited. The management of the portfolio is delegated to PSG Asset Management (Pty) Ltd, an authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act 2002, FSP no 29524. PSG Asset Management (Pty) Ltd and PSG Collective Investments (RF) Limited are subsidiaries of PSG Konsult Limited. PSG Collective Investments (RF) Limited can be contacted on +27(21) 799 8000; (toll free) 0800 600 168, via email assetmanagement@psg.co.za.

Conflict of interest disclosure

The Fund may from time to time invest in a portfolio managed by a related party. PSG Collective Investments (RF) Limited or the fund manager may negotiate a discount in fees charged by the underlying portfolio. All discounts negotiated are reinvested in the Fund for the benefit of the investors. Neither PSG Collective Investments (RF) Limited nor PSG Asset Management (Pty) Ltd retains any portion of such discount for their own accounts. The fund manager may use the brokerage services of a related party, PSG Securities Ltd.

Additional information is available free of charge on the website www.psg.co.za/asset-management and may include publications, brochures, forms and annual reports.

This is the Minimum Disclosure Document (MDD) for the PSG Diversified Income Fund A.

Investment objective (summary of investment policy)

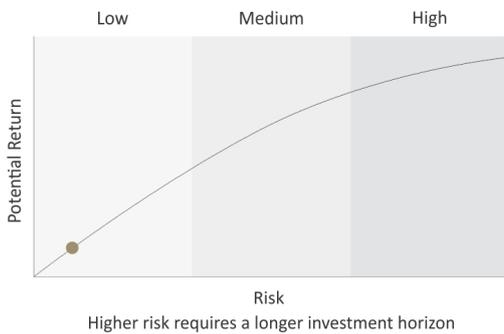

The PSG Income Fund's objective is to maximise income while achieving as much long-term capital appreciation as interest rate cycles allow. The investment policy provides for investment in assets in liquid form, a diversified range of fixed-interest securities, loan stock, debentures stock, bonds, unsecured notes, as well as other non-equity securities and financial instruments. The fund cannot invest in property, equities and preference shares.

Who should consider investing?

Fund specific risks: The fund sits within the lower end of the risk/reward spectrum. Investors should be comfortable with exposure to interest rate fluctuations and market volatility. The risk of short-term monetary loss is low but not completely eliminated. The portfolio is exposed to default and interest rate risks. Interest rate risk is the risk that the value of fixed income investments tends to decrease when interest rates and/or inflation rises. Default risk is where the issuers of fixed income instruments may not be able to meet interest or capital repayments.

This fund is suitable for investors who:

- have a low risk appetite
- require an income
- have an investment horizon of one year and longer

Current context

Fixed income market performance for the third quarter of 2020 was mixed following a very strong performance in the second quarter. This was largely due to global sentiment weakening over the period. Locally, the market was divided on the likely outcome of the interest rate decision before the Monetary Policy Committee (MPC) meeting on 18 September. In a close vote, the South African Reserve Bank (SARB) decided to maintain the repo rate unchanged at the current 3.5%, leaving markets roughly unchanged. Inflation printed at a low of 3.1% for the month of August 2020, largely in line with expectations which continue to plot a muted path for future inflation. The market is awaiting the revised budget (now expected 28 October 2020) and promised economic recovery plan by the President (the final version is expected mid-October) to assess whether the necessary reforms and adjustments will be made to ensure South Africa can return to a sustainable fiscal trajectory over the medium term. The narrative understandably remains fairly negative, as evidenced by the cheap valuations (high yields) we are seeing in the sovereign bond market. Importantly, the flow of liquidity we have seen introduced into the market during the year continues to provide relative yield stability, which has generally resulted in positive returns for fixed income investors over the quarter.

Nominal bonds delivered positive, cash-beating returns over the quarter. The area of the curve represented by the R186 (5 years) delivered an attractive 4.19% return. However, longer-dated nominal bonds underperformed this as the curve steepened over the period. Similarly, inflation-linked bonds delivered good performance, other than very long-dated bonds. These long-dated sovereign bonds were largely influenced by the poor global backdrop, with foreigners estimated to have sold roughly R7.7bn of bonds over the period. Cash delivered 1.16% returns for the quarter which was to be expected as rate cuts during the year begin to show in the cash market. Despite no further rate cuts, this low level of returns from cash is expected to continue, with a high likelihood of underperforming inflation and income targets. Corporate bond markets, despite the poorer fundamental backdrop, saw significant tightening in spreads over the period as the excess liquidity in the market and search for a cash-beating yields saw very high demand for these assets. As we have mentioned in previous communications, we believe this area of the market is benefiting from a search for yield and a low bar being placed on its inherent credit risk relative to the sovereign market. However, on a positive note, we have seen numerous corporate bond issuers returning to the market to raise funding, which is generally good for the functioning of the fixed income market.

Our perspective

The fixed income market remains characterised by diverging risk-adjusted return prospects when assessing the asset classes available to fixed income funds. We continue to believe that given the very visible bear thesis on sovereign bonds, the cheap valuations likely reflect this sentiment and therefore offer much better prospects to outperform cash and inflation over the near term. As noted, yields in non-sovereign bonds have fallen further over the period. We define risk as the risk of permanent capital loss to clients, and therefore remain cautious in areas where we believe the yields are not commensurate with the inherent risks – specifically in corporate bonds. Our funds continue to have a low long-term allocation to these assets.

We have taken advantage of the attractive inflation base effects that are due in the months ahead as inflation had reached a near-term bottom in Q2. Specifically, for the month of October 2020, the inflation-carry to be accrued is 1.3% (roughly an annualised 15.6% return). We have done so using the low duration R212 inflation-linked sovereign bond which has a term to maturity of 1.4 years and low credit risk. While we do not believe inflation is likely to increase sharply from these levels anytime soon, this should benefit clients significantly as we see inflation moderate to more normalised levels.

Portfolio performance and positioning

Over the quarter the PSG Income Fund returned 1.86% versus the benchmark return of 1.16%. The major contributor over this period was government bonds (1.03%), being positioned in the short end of the curve. Over a 1-year period the fund delivered a return of 9.73% versus the benchmark return of 6.19%.

It remains our preference to seek out value in sovereign bonds rather than other over-bought areas of the fixed income market, as we believe doing so better positions us to achieve the fund objective at reasonable risk levels. Our buy lists continue to favour sovereign exposure as a means of increasing the odds of achieving client objectives. Due to the unique dynamic of the inflation-linked bond market, we have significantly increased our exposure in an area of the curve (1.4 years) which should outperform even long-dated bonds over the near term. Further, these bonds are very liquid and provide us with both protection against unforeseen inflation increases, as well as ammunition should we see nominal bonds weaken around the budget.

The Income Fund has slightly increased its duration as a result. Importantly, the duration composition of the fund remains concentrated in the shorter-dated areas of the curve with the average term of nominal bond and inflation-linked bond exposure of roughly 5.5 years and 1.5 years respectively. We believe this is a sensible use of duration at a point in the rates cycle where duration risk is preferred over credit risk.

This is the Minimum Disclosure Document (MDD) for the PSG Income Fund A.

Investment objective (summary of investment policy)

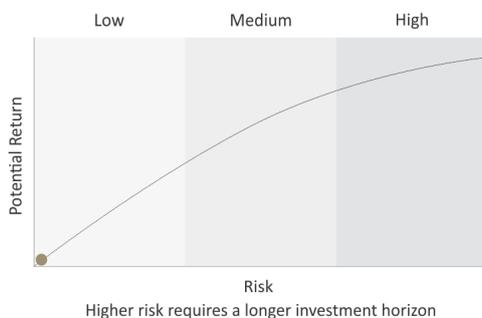

The PSG Money Market Fund's objective is to provide capital security, a steady income and easy access to your money. The fund invests in selected money market instruments issued by government, parastatals, corporates and banks with a maturity term of less than 13 months. The fund operates within the constraints of Regulation 28 of the Pension Funds Act.

Who should consider investing?

Fund specific risks: The fund sits at the bottom of the risk/reward spectrum. A money market fund offers a secure investment, but is not completely risk free and severe losses may reduce the capital value of the portfolio. The portfolio is exposed to default and interest rate risks. Interest rate risk is the risk that the value of fixed income investments tends to decrease when interest rates and/or inflation rises. Default risk is where the issuers of fixed income instruments may not be able to meet interest or capital repayments.

This fund is suitable for investors who:

- seek capital stability, interest income and easy access to their money through a low-risk investment
- need an interim investment vehicle or 'parking bay' for surplus money
- have a short-term investment horizon

Current context

Fixed income market performance for the third quarter of 2020 was mixed following a very strong performance in the second quarter. This was largely due to global sentiment weakening over the period. Locally, the market was divided on the likely outcome of the interest rate decision before the Monetary Policy Committee (MPC) meeting on 18 September. In a close vote, the South African Reserve Bank (SARB) decided to maintain the repo rate unchanged at the current 3.5%, leaving markets roughly unchanged. Inflation printed at a low of 3.1% for the month of August 2020, largely in line with expectations which continue to plot a muted path for future inflation. The market is awaiting the revised budget (now expected 28 October 2020) and promised economic recovery plan by the President (the final version is expected mid-October) to assess whether the necessary reforms and adjustments will be made to ensure South Africa can return to a sustainable fiscal trajectory over the medium term. The narrative understandably remains fairly negative, as evidenced by the cheap valuations (high yields) we are seeing in the sovereign bond market. Importantly, the flow of liquidity we have seen introduced into the market during the year continues to provide relative yield stability, which has generally resulted in positive returns for fixed income investors over the quarter.

Nominal bonds delivered positive, cash-beating returns over the quarter. The area of the curve represented by the R186 (5 years) delivered an attractive 4.19% return. However, longer-dated nominal bonds underperformed this as the curve steepened over the period. Similarly, inflation-linked bonds delivered good performance, other than very long-dated bonds. These long-dated sovereign bonds were largely influenced by the poor global backdrop, with foreigners estimated to have sold roughly R7.7bn of bonds over the period. Cash delivered 1.16% returns for the quarter which was to be expected as rate cuts during the year begin to show in the cash market. Despite no further rate cuts, this low level of returns from cash is expected to continue, with a high likelihood of underperforming inflation and income targets. Corporate bond markets, despite the poorer fundamental backdrop, saw significant tightening in spreads over the period as the excess liquidity in the market and search for a cash-beating yields saw very high demand for these assets. As we have mentioned in previous communications, we believe this area of the market is benefiting from a search for yield and a low bar being placed on its inherent credit risk relative to the sovereign market. However, on a positive note, we have seen numerous corporate bond issuers returning to the market to raise funding, which is generally good for the functioning of the fixed income market.

Our perspective

In an environment where cash rates are near all time lows given significant rate cuts by the SARB, the PSG Money Market Fund continues to prioritise a high-level liquidity and capital preservation. Cash curves currently offer little to no compensation for taking on term risk, as a result the fund is allocating to shorter-dated instruments and holding higher levels of cash. Specifically, the fund is building a book of shorter-dated treasury bills, (current yields on offer are higher than yields on the bank funding curves), while maintaining lower credit risk. As the low rate environment continues to persist, we expect the fund's yield to increasingly reflect this, however, the fund should outperform cash accounts over the near term.

Portfolio performance and positioning

Over the quarter the PSG Money Market Fund returned 1.00% versus the benchmark return of 1.14%. The fund is suitable for investors who need an interim investment vehicle or 'parking bay' for surplus money and a short-term investment horizon.

The fund's exposure to bank NCDs has declined from the previous quarter. This is due to the fund's book of NCDs gradually maturing and being deployed into buying Treasury bills and SARB Debentures. The Treasury bills are of a short maturity, offering an adequate level of liquidity as well as a yield pickup to the bank NCD curve. The debentures also offer an added yield to the bank NCD curve and are bought with a very short term to maturity. With the higher Treasury bill and SARB Debenture exposure relative to historic corporate and bank exposure, the fund's overall credit risk is significantly reduced compared to the previous quarter.

Rolling returns (%)

This chart shows you how the performance can vary over time. It is an indication of the distribution of historical rolling returns from the portfolio over each rolling 12-month period.

What is a total expense ratio?

The Total Expense Ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past three years. This percentage of the average Net Asset Value (NAV) of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. A higher TER ratio does not necessarily imply a poor return, nor does a low TER ratio imply a good return. The current TER cannot be regarded as an indication of future TERs. Part of the Annual Management Fee is payable to the financial intermediary. The sum of the TER and transaction costs is shown as the Total Investment Charge. Since Fund returns are quoted after the deduction of these expenses, the TER and transaction costs should not be deducted again from published returns.

Total investment charge

Total Investment Charge annualised for the period 1/10/2017 to 30/09/2020

Total Expense Ratio % (incl. VAT)	0.59
<i>Annual Management Fee % (incl. VAT)</i>	<i>0.58</i>
<i>Other costs excluding transaction costs % (incl. VAT)</i>	<i>0.01</i>
<i>Transaction costs % (incl. VAT)</i>	<i>0.11</i>
Total Investment Charge % (incl. VAT)	0.70

Transaction costs

Transaction costs are shown separately and are a necessary cost in administering the Financial Product and impacts Financial Product returns.

Transaction costs should not be considered in isolation as return may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Fees

A schedule of fees and charges and maximum commissions is available on request from PSG Collective Investments (RF) Limited. Commission and incentives may be paid and, if so, are included in the overall costs. Different classes of participatory interest can apply to these portfolios and are subject to different fees, charges and possibly dividend withholding tax and will thus have differing performances. Adviser fees are negotiated between the client and adviser and is distinct from the other fees on this document.

Disclaimer

Collective Investment Schemes in Securities (CIS) are generally medium to long-term investments. The value of participatory interests (units) or the investment may go down as well as up and past performance is not a guide to future performance. Fluctuations or movements in the exchange rates may cause the value of underlying international investments to go up or down. CIS are traded at ruling prices and can engage in borrowing and scrip lending. The portfolio may borrow up to 10% of its market value to bridge insufficient liquidity. Where foreign securities are included in a portfolio, the portfolio is exposed to risks such as potential constraints on liquidity and the repatriation of funds, macroeconomic, political, foreign exchange, tax, settlement and potential limitations on the availability of market information. The portfolios may be capped at any time in order for them to be managed in accordance with their mandate. PSG Collective Investments (RF) Limited does not provide any guarantee either with respect to the capital or the return of the portfolio. Due to rounding, numbers presented throughout this document may not add up precisely to the totals provided.

Money Market

The PSG Money Market Fund maintains a constant price and is targeted at a constant value. The quoted yield is calculated by annualizing the average 7 day yield. A money market portfolio is not a bank deposit account. Excessive withdrawals from the portfolio may place the portfolio under liquidity pressures and in such circumstances a process of ring-fencing of withdrawal instructions and managed payouts over time may be followed. The total return to the investor is made up of interest received and any gain or loss made on any particular instrument. In most cases the return will merely have the effect of increasing or decreasing the daily yield but in the case of abnormal losses it can have the effect of reducing the capital value of the portfolio.

Regulation 28

The fund is managed according to Regulation 28 of the Pension Funds Act. The South African retirement fund industry is governed by the Pension Funds Act No. 24 of 1956. Regulation 28 of the Pension Fund s Act prescribes the maximum limits in asset classes that an approved retirement fund may invest in. Exposures in excess of the limits will be corrected immediately, except where due to a change in the fair value or characteristic of an asset, e.g. market value fluctuations, in which case they will be corrected within a reasonable time period.

Performance

All performance data for a lump sum, net of fees, include income and assumes reinvestment of income on a NAV to NAV basis. Annualised performances show longer term performance rescaled over a 12 month period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Performance is calculated for the portfolio and individual investor performance may differ as a result thereof. The portfolio is valued at 15h00 daily. Cut-off time is determined by the platform. Income distributions are net of any applicable taxes. Actual annual figures are available to the investor on request. Prices are published daily and available on the website www.psg.co.za/asset-management and in the daily newspapers. Figures quoted are from Morningstar Inc.

Pricing

Forward pricing is used. Unit trust prices are calculated on a net asset value (NAV) basis, which is the market value of all assets in the portfolio including income accruals less permissible deductions divided by the number of units in issue.

Redemptions

The ability of a portfolio to repurchase is dependent upon the liquidity of the securities and cash of the portfolio. To protect investors, a manager may suspend repurchases for a period, subject to regulatory approval, to await liquidity. A suspension ensures that the sale of a large number of units will not force PSG Collective Investments to sell the underlying investments at a price in the market which could have a negative impact on investors. PSG Collective Investments will keep all investors informed should a situation arise where such suspension is required.

Company details

PSG Collective Investments (RF) Limited is registered as a CIS Manager with the Financial Sector Conduct Authority, and a member of the Association of Savings and Investments South Africa (ASISA) through its holdings company PSG Konsult Limited. The management of the portfolio is delegated to PSG Asset Management (Pty) Ltd, an authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act 2002, FSP no 29524. PSG Asset Management (Pty) Ltd and PSG Collective Investments (RF) Limited are subsidiaries of PSG Konsult Limited. PSG Collective Investments (RF) Limited can be contacted on +27(21) 799 8000; (toll free) 0800 600 168, via email assetmanagement@psg.co.za.

Additional information

Additional information is available free of charge on the website

www.psg.co.za/asset-management and may include publications, brochures, forms and annual reports.

This is the Minimum Disclosure Document (MDD) for the PSG Money Market Fund A.

Investment objective (summary of investment policy)

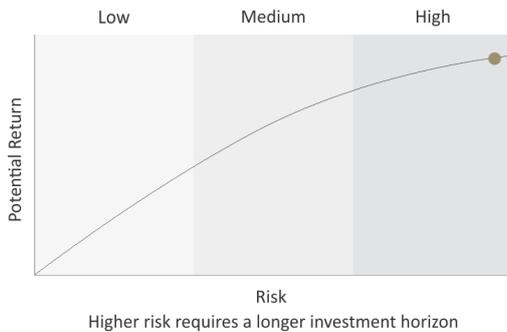

The PSG Global Equity Feeder Fund's investment objective is to achieve capital growth over the long term with the generation of income not being the main objective of the portfolio. It is a rand-denominated equity feeder fund whose investment policy provides for it to invest solely into the PSG Global Equity Sub-Fund, a sub-fund of PSG Global Funds SICAV plc, denominated in US dollars. The underlying fund invests mainly in global listed securities and aims to reduce risk relative to its benchmark. Please refer to the Minimum Disclosure Document of the PSG Global Equity Sub-Fund for more information.

Who should consider investing?

Fund specific risks: The fund sits at the top end of the risk/reward spectrum and investors should be comfortable with fluctuations in global equity markets. The risk of short-term monetary loss is high due to volatility of exchange rates and global markets. The portfolio is exposed to equity and currency risk. Investing in foreign securities may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations. Changes in the relative values of different currencies may adversely affect the value of investments and any related income.

This fund is suitable for investors who:

- want exposure to global equities without personally expatriating rands
- are comfortable with international equity market and currency fluctuations
- have a long-term investment horizon of seven years and longer

Current context

The positive momentum equity markets enjoyed during the second quarter of the year was sustained during the quarter ending 30 September. Global equities reached all-time highs in early September, ending a bear market that had, at one point, reduced the value of publicly traded companies by more than a third. This continues to be a remarkable outcome considering the deepest global recession in decades and the ongoing elevated levels of economic uncertainty in the wake of the COVID-19 pandemic.

Growth and technology companies are large components of global indices and have overwhelmingly driven the strong headline recovery. However, the gains have not been evenly distributed and most global shares are still in negative territory. Year to date the MSCI World Index delivered a total return of 2.1%, with the MSCI World Growth index +19.2% and the MSCI World Value Index losing 14%.

Our perspective

It goes without saying that these are unprecedented times, but even more acutely so for value investors, as growth and large cap stocks continue to outperform to a remarkable degree. History suggests that over long periods of time, investors are rewarded for investing in cheaper assets, rather than expensive ones. This is especially true where there is a degree of discomfort, i.e. when investing in out-of-favour assets with above average chances of being mispriced. We are witnessing one of the most brutal value cycles on record, with the extent of the divergence in relative performance compared to growth stocks being by far the widest this century, surpassing the experience of the Great Depression and the dotcom bubble. However, we believe this creates a very interesting opportunity for the (very few) investors who are prepared to invest in what is out of favour. The current environment is presenting an abundance of such investment opportunities – a setup which we believe will generate excellent long-term returns for investors.

Considering the high expectations reflected in aggressively crowded areas of the market, as in the case of the largest constituents, we believe there has never been a more valuable juncture for a differentiated, active approach to add a tremendous benefit to client portfolios looking forward. Our sense is that there is a high degree of complacency at the index level that little can go wrong, and that past performance can be replicated with a high degree of certainty. We are not complacent in our approach, and recognise the risks of simply projecting a past experience as a given future outcome.

As tough as the environment has been, we think current market conditions are highly favourable for building well-diversified portfolios, and as such we are excited about prospects embedded in our portfolios.

Portfolio performance and positioning

Cheap stocks have under-performed significantly over the last two years with the Covid-19 pandemic exacerbating this situation and accelerating several multi-year trends. Consequently, the fund's recent performance has been disappointing. While the future remains uncertain, we have used market dislocations and very low prices to the benefit of our clients. This provides us with confidence that the recent drawdowns will prove to be temporary. Encouragingly, most of our actions from March onwards have delivered pleasing results to date. We have high levels of confidence that the companies our clients are invested in trade at a material discount to our assessment of their worth. Our highest conviction ideas are quality businesses with inherent resilience and cash generation that support our expectation that 2020 will set a foundation for strong growth in the years ahead.

During the quarter the fund materially increased its exposure to select counters at favourable prices while reducing its holdings in areas where strong share price performance resulted in a lower margin of safety.

Material purchases during the quarter were Berkshire Hathaway, Asahi Group, Exor NV, Nordstrom and Amadeus IT Group. Strong share price performances and narrower margins of safety resulted in a reduction in holdings such as Brookfield Asset Management, Wheaton Precious Metals, Pandora A/S and, after a roughly 400% rally off the March lows, a complete exit of London-listed Premier Foods.

The PSG Global Equity Sub-Fund has diversified exposure across sectors, currencies and geographies. The largest regional exposures are the United States (accounting for 39.8% of fund value), followed by the United Kingdom (20%), Europe (18.2%) and Japan (13.7%).

Over the quarter the PSG Global Equity Feeder Fund returned 0.95% versus the benchmark return of 3.61%. The contributors over this period were industrials (2.16%), financials (1.64%) and consumer staples (1.08%) and the detractors were communications (-0.32%) and energy (-0.73%). The fund is suitable for investors with an investment term of 5 years and longer. Over the short-term returns can be volatile and for this reason it is important to measure fund returns over the relevant investment term. Since inception the fund produced an annual return of 8.97% versus the benchmark return of 19.15%.

Changes in portfolio positioning

Q2 2020		Q3 2020	
Equities	98.4%	Equities	98.7%

This is the Minimum Disclosure Document (MDD) for the PSG Global Equity Feeder Fund A.

Investment objective (summary of investment policy)

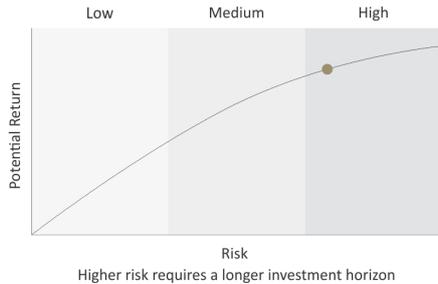

The PSG Global Flexible Feeder Fund's investment objective is to achieve superior medium- to long-term capital growth through exposure to selected sectors of the global equity market, bond market and money market. The fund is a rand-denominated feeder fund, whose investment policy provides for it to invest solely into the PSG Global Flexible Sub-Fund, a sub-fund of PSG International Funds SICAV plc. The underlying fund has a flexible asset allocation mandate and equity exposure will be varied based on opportunity. The fund may invest up to 100% in equities, along with debt instruments or money market instruments. Please refer to the Minimum Disclosure Document of the PSG Global Flexible Sub-Fund for full information.

Who should consider investing?

Fund specific risks: The fund sits at the top end of the risk/reward spectrum and investors should be comfortable with fluctuations in global equity markets. The risk of short-term monetary loss is high due to volatility of exchange rates and global markets. The portfolio is exposed to equity as well as default and interest rate risks. Interest rate risk is the risk that the value of fixed income investments tends to decrease when interest rates and/or inflation rises. Default risk is where the issuers of fixed income instruments may not be able to meet interest or capital repayments. Investing in foreign securities may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations. Changes in the relative values of different currencies may adversely affect the value of investments and any related income.

This fund is suitable for investors who:

- want exposure to global equities without personally expatriating rands
- are comfortable with international equity market and currency fluctuations
- have a long-term investment horizon of five years and longer

Current context

The positive momentum equity markets enjoyed during the second quarter of the year was sustained during the quarter ending 30 September. Global equities reached all-time highs in early September, ending a bear market that had, at one point, reduced the value of publicly traded companies by more than a third. This continues to be a remarkable outcome considering the deepest global recession in decades and the ongoing elevated levels of economic uncertainty in the wake of the COVID-19 pandemic.

Growth and technology companies are large components of global indices and have overwhelmingly driven the strong headline recovery. However, the gains have not been evenly distributed and most global shares are still in negative territory. Year to date the MSCI World Index delivered a total return of 2.1%, with the MSCI World Growth index +19.2% and the MSCI World Value Index losing 14%.

Our perspective

It goes without saying that these are unprecedented times, but even more acutely so for value investors, as growth and large cap stocks continue to outperform to a remarkable degree. History suggests that over long periods of time, investors are rewarded for investing in cheaper assets, rather than expensive ones. This is especially true where there is a degree of discomfort, i.e. when investing in out-of-favour assets with above average chances of being mispriced. We are witnessing one of the most brutal value cycles on record, with the extent of the divergence in relative performance compared to growth stocks being by far the widest this century, surpassing the experience of the Great Depression and the dotcom bubble. However, we believe this creates a very interesting opportunity for the (very few) investors who are prepared to invest in what is out of favour. The current environment is presenting an abundance of such investment opportunities – a setup which we believe will generate excellent long-term returns for investors.

Considering the high expectations reflected in aggressively crowded areas of the market, as in the case of the largest constituents, we believe there has never been a more valuable juncture for a differentiated, active approach to add a tremendous benefit to client portfolios looking forward. Our sense is that there is a high degree of complacency at the index level that little can go wrong, and that past performance can be replicated with a high degree of certainty. We are not complacent in our approach, and recognise the risks of simply projecting a past experience as a given future outcome.

As tough as the environment has been, we think current market conditions are highly favourable for building well-diversified portfolios, and as such we are excited about prospects embedded in our portfolios.

Portfolio performance and positioning

Cheap stocks have under-performed significantly over the last two years with the Covid-19 pandemic exacerbating this situation and accelerating several multi-year trends. Consequently, the fund's recent performance has been disappointing. While the future remains uncertain, we have used market dislocations and very low prices to the benefit of our clients. This provides us with confidence that the recent drawdowns will prove to be temporary. Encouragingly, most of our actions from March onwards have delivered pleasing results to date. We have high levels of confidence that the companies our clients are invested in trade at a material discount to our assessment of their worth. Our highest conviction ideas are quality businesses with inherent resilience and cash generation that support our expectation that 2020 will set a foundation for strong growth in the years ahead.

During the quarter the fund materially increased its exposure to select counters at favourable prices while reducing its holdings in areas where strong share price performance resulted in a lower margin of safety.

Material purchases during the quarter were Berkshire Hathaway, Asahi Group, Exor NV, Nordstrom and Amadeus IT Group. Strong share price performances and narrower margins of safety resulted in a reduction of holdings such as Brookfield Asset Management, Wheaton Precious Metals, Pandora A/S and after a roughly 400% rally off the March lows, a complete exit of London-listed Premier Foods.

The PSG Global Flexible Sub-Fund has diversified exposure across sectors, currencies and geographies. The largest regional exposures are the United States (accounting for 33.9% of fund value), followed by the United Kingdom (16.8%), Europe (15.8%) and Japan (13.2%). The fund holds below-average levels of cash from a historical perspective. While parts of the market are trading at elevated levels, it reflects the attractiveness of the opportunity set: we can find many good businesses that are out-of-favour and hence trading at deep crisis price levels. The current cash and bond holding of 14.5% of portfolio value still provides valuable firepower as opportunities that meet our criteria for investment become available.

Over the quarter the PSG Global Flexible Feeder Fund returned 1.4% versus the benchmark return of -1.3%. The contributors over this period were industrials (1.95%), financials (1.33%), consumer staples (1.00%) and the detractors were communication (-0.29%) and energy (-0.48%). The fund is suitable for investors with an investment term of 5 years and longer. Over the short-term returns can be volatile and for this reason it is important to measure fund returns against the relevant investment term. Since inception the fund produced an annual return of 9.4% versus the benchmark return of 17.0%.

Changes in portfolio positioning

Q2 2020		Q3 2020	
Equities	81.7%	Equities	85.5%
Bonds	0.9%	Bonds	0.9%
Cash	17.4%	Cash	13.6%

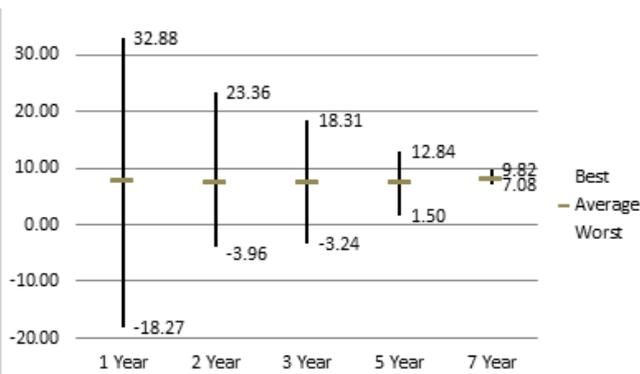

Q2 2020		Q3 2020	
US	29.8%	US	33.9%
Europe	13.8%	Europe	15.8%
UK	19.7%	UK	16.8%
Asia ex Japan	0.0%	Asia ex Japan	0.4%
Japan	12.2%	Japan	13.2%
Canada	3.8%	Canada	2.7%
Africa	2.4%	Africa	2.7%
Cash and Bonds	18.3%	Cash and Bonds	14.5%

There may be slight differences in the totals due to rounding.

Please note that the above commentary and portfolio positioning is for the US dollar-denominated PSG Global Flexible Sub-Fund. The PSG Global Flexible Feeder Fund is 100% invested in the underlying US dollar fund. However, there may be small short-term valuation, trading and translation differences between the two funds.

Rolling returns (%)

This chart shows you how the performance can vary over time. It is an indication of the distribution of historical rolling returns from the portfolio over each rolling 12-month period.

The Total Expense Ratio (TER) is the annualised percentage of the Fund's average assets under management that has been used to pay the Fund's actual expenses over the past three years. This percentage of the average Net Asset Value (NAV) of the portfolio was incurred as charges, levies and fees related to the management of the portfolio. A higher TER ratio does not necessarily imply a poor return, nor does a low TER ratio imply a good return. The current TER cannot be regarded as an indication of future TERs. Part of the Annual Management Fee is payable to the financial intermediary. The sum of the TER and transaction costs is shown as the Total Investment Charge. Since Fund returns are quoted after the deduction of these expenses, the TER and transaction costs should not be deducted again from published returns.

Total investment charge

Total Investment Charge annualised for the period 1/10/2017 to 30/09/2020

Total Expense Ratio % (incl. VAT)	2.10
Annual Management Fee % (incl. VAT)	0.86
Other costs excluding transaction costs % (incl. VAT)	1.24
Transaction costs % (incl. VAT)	0.23
Total Investment Charge % (incl. VAT)	2.33

Transaction costs

Transaction costs are shown separately and are a necessary cost in administering the Financial Product and impacts Financial Product returns.

Transaction costs should not be considered in isolation as return may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Fees

A schedule of fees and charges and maximum commissions is available on request from PSG Collective Investments (RF) Limited. Commission and incentives may be paid and, if so, are included in the overall costs. Different classes of participatory interest can apply to these portfolios and are subject to different fees, charges and possibly dividend withholding tax and will thus have differing performances. Adviser fees are negotiated between the client and adviser and is distinct from the other fees on this document.

Disclaimer

Collective Investment Schemes in Securities (CIS) are generally medium to long-term investments. The value of participatory interests (units) or the investment may go down as well as up and past performance is not a guide to future performance. Fluctuations or movements in the exchange rates may cause the value of underlying international investments to go up or down. CIS are traded at ruling prices and can engage in borrowing and scrip lending. The portfolio may borrow up to 10% of its market value to bridge insufficient liquidity. Where foreign securities are included in a portfolio, the portfolio is exposed to risks such as potential constraints on liquidity and the repatriation of funds, macroeconomic, political, foreign exchange, tax, settlement and potential limitations on the availability of market information. The portfolios may be capped at any time in order for them to be managed in accordance with their mandate. PSG Collective Investments (RF) Limited does not provide any guarantee either with respect to the capital or the return of the portfolio. Due to rounding, numbers presented throughout this document may not add up precisely to the totals provided.

Feeder Funds

A Feeder Fund is a portfolio which, apart from assets in liquid form, invests in a single portfolio of a collective investment scheme, which levies its own charges and which could result in a higher fee structure for the feeder fund.

Performance

All performance data for a lump sum, net of fees, include income and assumes reinvestment of income on a NAV to NAV basis. Annualised performances show longer term performance rescaled over a 12 month period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Performance is calculated for the portfolio and individual investor performance may differ as a result thereof. The portfolio is valued at 15h00 daily. Cut-off time is determined by the platform. Income distributions are net of any applicable taxes. Actual annual figures are available to the investor on request. Prices are published daily and available on the website www.psg.co.za/asset-management and in the daily newspapers. Figures quoted are from Morningstar Inc.

Pricing

Forward pricing is used. Unit trust prices are calculated on a net asset value (NAV) basis, which is the market value of all assets in the portfolio including income accruals less permissible deductions divided by the number of units in issue.

Redemptions

The ability of a portfolio to repurchase is dependent upon the liquidity of the securities and cash of the portfolio. To protect investors, a manager may suspend repurchases for a period, subject to regulatory approval, to await liquidity. A suspension ensures that the sale of a large number of units will not force PSG Collective Investments to sell the underlying investments at a price in the market which could have a negative impact on investors. PSG Collective Investments will keep all investors informed should a situation arise where such suspension is required.

Company details

PSG Collective Investments (RF) Limited is registered as a CIS Manager with the Financial Sector Conduct Authority, and a member of the Association of Savings and Investments South Africa (ASISA) through its holdings company PSG Konsult Limited. The management of the portfolio is delegated to PSG Asset Management (Pty) Ltd, an authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act 2002, FSP no 29524. PSG Asset Management (Pty) Ltd and PSG Collective Investments (RF) Limited are subsidiaries of PSG Konsult Limited. PSG Collective Investments (RF) Limited can be contacted on +27(21) 799 8000; (toll free) 0800 600 168, via email assetmanagement@psg.co.za.

Conflict of interest disclosure

The Fund may from time to time invest in a portfolio managed by a related party. PSG Collective Investments (RF) Limited or the fund manager may negotiate a discount in fees charged by the underlying portfolio. All discounts negotiated are reinvested in the Fund for the benefit of the investors. Neither PSG Collective Investments (RF) Limited nor PSG Asset Management (Pty) Ltd retains any portion of such discount for their own accounts. The fund manager may use the brokerage services of a related party, PSG Securities Ltd.
